WESTERN
AUSTRALIA

Structure for this report

Background

Problem Description

Planned method

Progress

Gravitational waves

- ▶ Predicted to exist in 1915 by the theory of general relativity

Gravitational waves

- ▶ Predicted to exist in 1915 by the theory of general relativity
- ▶ Shown to exist in 1974 using a binary pair of neutron stars

Gravitational waves

- ▶ Predicted to exist in 1915 by the theory of general relativity
- ▶ Shown to exist in 1974 using a binary pair of neutron stars
- ▶ Detectors built throughout 2000s failed to reach the required sensitivity

Gravitational waves

- ▶ Predicted to exist in 1915 by the theory of general relativity
- ▶ Shown to exist in 1974 using a binary pair of neutron stars
- ▶ Detectors built throughout 2000s failed to reach the required sensitivity
- ▶ Increased sensitivity from rebuilds in the 2010s brought first direct detection
- ▶ New detectors still being brought online!
 - ▶ KAGRA
 - ▶ LIGO India

Pipelines

- ▶ Each detector emits an enormous amount of data

Pipelines

- ▶ Each detector emits an enormous amount of data
- ▶ Data processing pipelines needed to be developed to process and combine outputs

Pipelines

- ▶ Each detector emits an enormous amount of data
- ▶ Data processing pipelines needed to be developed to process and combine outputs
- ▶ Summed Parallel Infinite Impulse Response (SPIIR) pipeline

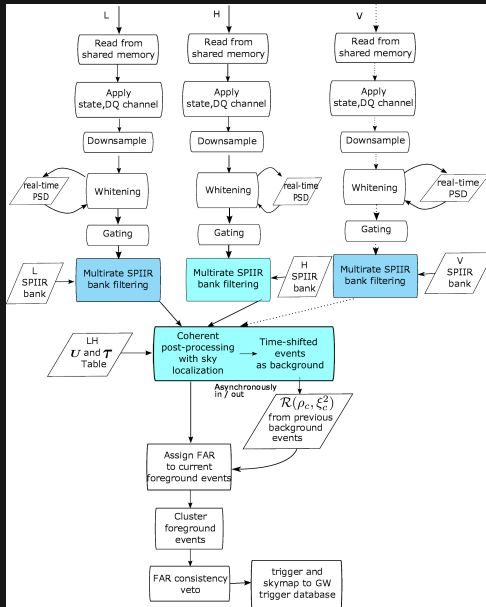

The SPIIR Pipeline

- ▶ IIR filters are typically used in signal processing
- ▶ Can be used to approximate the shapes of potential gravitational waves

The SPIIR Pipeline

- ▶ IIR filters are typically used in signal processing
- ▶ Can be used to approximate the shapes of potential gravitational waves
- ▶ Later development introduced GPU acceleration
- ▶ Detection and localization using frequentist coherent search added as post-processing step

The SPIIR Pipeline

Architectural issues

Architectural issues

- ▶ Maximum of 3 detectors (2 is allowed)

Architectural issues

- ▶ Maximum of 3 detectors (2 is allowed)
- ▶ Fixed detector ordering

Architectural issues

- ▶ Maximum of 3 detectors (2 is allowed)
- ▶ Fixed detector ordering
- ▶ All detectors must be used for all parts of post-processing

Planned solution

- ▶ Reworked data structures

Planned solution

- ▶ Reworked data structures
- ▶ Separation of detection and localization

Planned method

Planned method

- ▶ Develop an understanding of the codebase

Planned method

- ▶ Develop an understanding of the codebase
 - ▶ What data structures need to be changed?
 - ▶ How are they used?

Planned method

- ▶ Develop an understanding of the codebase
 - ▶ What data structures need to be changed?
 - ▶ How are they used?
 - ▶ Where can I separate detection and localization?
 - ▶ What are the relevant algorithms?
 - ▶ What's the data flow?

Planned method

- ▶ Develop an understanding of the codebase
 - ▶ What data structures need to be changed?
 - ▶ How are they used?
 - ▶ Where can I separate detection and localization?
 - ▶ What are the relevant algorithms?
 - ▶ What's the data flow?
 - ▶ Are there any areas for optimization?

Planned method

- ▶ Develop an understanding of the codebase
 - ▶ What data structures need to be changed?
 - ▶ How are they used?
 - ▶ Where can I separate detection and localization?
 - ▶ What are the relevant algorithms?
 - ▶ What's the data flow?
 - ▶ Are there any areas for optimization?
- ▶ Refactor the pipeline

Planned method

- ▶ Develop an understanding of the codebase
 - ▶ What data structures need to be changed?
 - ▶ How are they used?
 - ▶ Where can I separate detection and localization?
 - ▶ What are the relevant algorithms?
 - ▶ What's the data flow?
 - ▶ Are there any areas for optimization?
- ▶ Refactor the pipeline
- ▶ Measure performance differences

- ▶ Still in analysis phase

- ▶ Still in analysis phase
- ▶ Developed tools to assist with analysis
- ▶ Can be useful for other people wishing to analyse similar codebases

Progress

```
tommoa:~/Documents/research# [master] python3 -m utils --help
usage: utils [-h] {combine,co,iir,dot,pipeline} ...
```

Utilities to help with Tom Almeida's GENG5551 research.

optional arguments:

-h, --help show this help message and exit

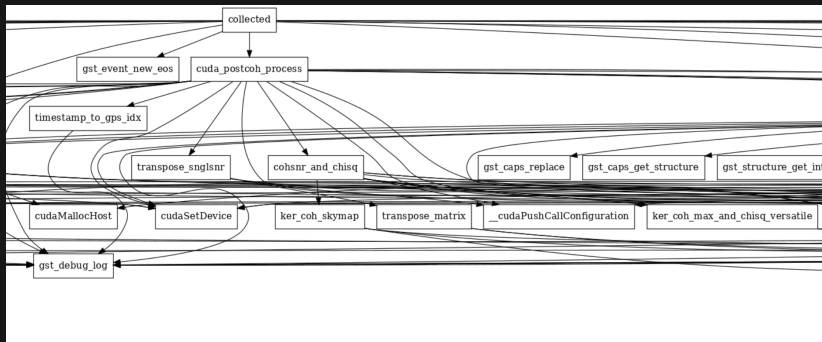

subcommands:

{combine,co,iir,dot,pipeline}

subcommand help

```
tommoa:~/Documents/research# [master]
```

Progress

Progress

- ▶ `ker_coh_skymap`
 - ▶ $O(P + C \log C + A)$
 - ▶ Best case could be optimized!
- ▶ `ker_coh_max_and_chisq_versatile`
 - ▶ $O(P(A \log A + H(A \log A + DA \log DA)))$

Progress

- ▶ `ker_coh_skymap`
 - ▶ $O(P + C \log C + A)$
 - ▶ Best case could be optimized!
- ▶ `ker_coh_max_and_chisq_versatile`
 - ▶ $O(P(A \log A + H(A \log A + DA \log DA)))$
- ▶ $A \rightarrow S(D + D^2)$
- ▶ $P \rightarrow$ number of peaks
- ▶ $H \rightarrow$ number of hist trials
- ▶ $D \rightarrow$ number of detectors
- ▶ $S \rightarrow$ number of sky directions
- ▶ $C \rightarrow$ size of cohsnr array

- ▶ `ker_coh_skymap`
 - ▶ $O(P + C \log C + A)$
 - ▶ Best case could be optimized!
- ▶ `ker_coh_max_and_chisq_versatile`
 - ▶ $O(P(A \log A + H(A \log A + DA \log DA)))$
- ▶ $A \rightarrow S(D + D^2)$
- ▶ $P \rightarrow$ number of peaks
- ▶ $H \rightarrow$ number of hist trials
- ▶ $D \rightarrow$ number of detectors
- ▶ $S \rightarrow$ number of sky directions
- ▶ $C \rightarrow$ size of cohsnr array
- ▶ There are some constant term optimizations to be made!

What's next?

What's next?

- ▶ Analysis of codebase should be finished around the end of June

What's next?

- ▶ Analysis of codebase should be finished around the end of June
- ▶ Write up of proposed changes by mid-July

What's next?

- ▶ Analysis of codebase should be finished around the end of June
- ▶ Write up of proposed changes by mid-July
- ▶ Start on refactoring mid-July

Thank you!
